DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance: in combination with other limitations of the claim, the prior art fails to teach or suggest a radio transmitter, comprising: a digital processor that receives digital data, that digitally modulates the digital data to produce a digital information signal, and that compensates the digital information signal to produce a pre-compensated digital information signal that is pre-compensated for group delay variation and magnitude response characteristics of at least one downstream filter as called in claim 1; and producing, in a digital processor, a magnitude response that is substantially inverted to a magnitude response of the PLL for a specified frequency band of interest to compensate for the partial distortion by the loop filter of the PLL of the continuous waveform signal as called in claim 11; and a digital processor for producing the pre-compensated digital information signal, the digital processor further comprising: PLL magnitude equalizer for producing a magnitude response that is substantially inverted to a PLL magnitude response for a specified frequency band; and a TX chain group delay equalizer for reducing overall group delay variation as called for in claim 14. Therefore, claims 1-20 are presently allowed.
